

Generative AI for Social Media Marketing

WSQ • TGS-2021003023 •

2 days • 16 hours
Version v1.1 • 13 Sep 2026

Tertiary Infotech Academy Pte Ltd

UEN 201200696W

Digital attendance and TRAQOM

WSQ attendance evidence • front-of-course reminder

AM

Use the trainer-provided SSG attendance QR for the morning session.

PM

Record the afternoon session separately.

Assessment

Complete the assessment attendance record.

TRAQOM

Complete the course quality survey when invited.

Trainer profile template

Trainer details are completed for the actual delivery

Role and credentials

Trainer name, relevant qualification and industry experience.

Session responsibilities

Demonstrate the workflow, review evidence, support practice and explain assessment.

Dr Alfred Ang

Course developer and trainer profile • verified from supplied resume

Background

Founder of Tertiary Courses; PhD in Electrical and Electronics Engineering, NUS.

Training practice

ACTA-certified trainer and DACE-certified curriculum developer; teaches AI and digital technology.

Download course material

Access map • current approved learner resources

v1.1

01 Campaign objective and KPI tree: operating model MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

business goal,
audience, baseline

2 AI-assisted work

map goal to one
primary conversion
event

3 Reviewable artifact

SMART brief and KPI
owner

4 Control point

Choose lead volume
only with quality
guardrail

Source trace: official • Lab 01 • Human approval precedes publication.

01 Campaign objective and KPI tree: reusable prompt PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT business goal, audience, baseline

TASK map goal to one primary conversion event

RETURN SMART brief and KPI owner; include a source column, assumption flag and reviewer decision.

RULE Choose lead volume only with quality guardrail

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Vanity engagement masks low-intent traffic

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

01 Campaign objective and KPI tree: worked comparison CHART

Read the signal

Leads: 18 → 25 → 32. Synthetic teaching data.

Decision rule

Choose lead volume only with quality guardrail

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

01 Campaign objective and KPI tree: decision matrix DECISION

Gate	Evidence to inspect	Action
Input quality	business goal, audience, baseline	Hold if unverified
Output fitness	SMART brief and KPI owner	Choose lead volume only with quality guardrail
Risk review	Vanity engagement masks low-intent traffic	Escalate or revise
Metric readout	Leads and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

01 Campaign objective and KPI tree: review evidence ^{EVIDENCE}

Artifact to retain

SMART brief and KPI owner.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Vanity engagement masks low-intent traffic

Release check

Choose lead volume only with quality guardrail. Recheck leads against the campaign objective after launch.

Lab 01 evidence: save the artifact, decision and one corrected revision. Source: official.

02 Audience evidence and consent: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

aggregate insights,
interview notes,
consent status

2 AI-assisted work

separate observed
signal from AI
inference

3 Reviewable artifact

evidence-backed
audience segment

4 Control point

Reject personas
without a source and
confidence tag

Source trace: IBM • Lab 01 • Human approval precedes publication.

02 Audience evidence and consent: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT aggregate insights, interview notes, consent status

TASK separate observed signal from AI inference

RETURN evidence-backed audience segment; include a source column, assumption flag and reviewer decision.

RULE Reject personas without a source and confidence tag

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Inferred sensitive traits can breach trust

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

02 Audience evidence and consent: worked comparison CHART

Read the signal

Qualified visits: 210 → 260 → 305.
Synthetic teaching data.

Decision rule

Reject personas without a source and confidence tag

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

02 Audience evidence and consent: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	aggregate insights, interview notes, consent status	Hold if unverified
Output fitness	evidence-backed audience segment	Reject personas without a source and confidence tag
Risk review	Inferred sensitive traits can breach trust	Escalate or revise
Metric readout	Qualified visits and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

02 Audience evidence and consent: review evidence

EVIDENCE

Artifact to retain

evidence-backed audience segment. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Inferred sensitive traits can breach trust

Release check

Reject personas without a source and confidence tag. Recheck qualified visits against the campaign objective after launch.

Lab 01 evidence: save the artifact, decision and one corrected revision. Source: IBM.

03 Customer journey mapping: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

awareness questions,
comparison needs,
conversion friction

2 AI-assisted work

link each stage to
content, CTA and
metric

3 Reviewable artifact

journey-to-content
matrix

4 Control point

Every stage needs a
testable next action

Source trace: legacy:46-51 • Lab 01 • Human approval precedes publication.

03 Customer journey mapping: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT awareness questions, comparison needs, conversion friction

TASK link each stage to content, CTA and metric

RETURN journey-to-content matrix; include a source column, assumption flag and reviewer decision.

RULE Every stage needs a testable next action

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

A single post cannot serve every intent

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

03 Customer journey mapping: worked comparison

CHART

Read the signal

Click rate: 1.5 → 2.1 → 2.8. Synthetic teaching data.

Decision rule

Every stage needs a testable next action

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

03 Customer journey mapping: decision matrix

Gate	Evidence to inspect	Action
Input quality	awareness questions, comparison needs, conversion friction	Hold if unverified
Output fitness	journey-to-content matrix	Every stage needs a testable next action
Risk review	A single post cannot serve every intent	Escalate or revise
Metric readout	Click rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

03 Customer journey mapping: review evidence

EVIDENCE

Artifact to retain

journey-to-content matrix.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

A single post cannot serve every intent

Release check

Every stage needs a testable next action. Recheck click rate against the campaign objective after launch.

Lab 01 evidence: save the artifact, decision and one corrected revision. Source: legacy:46-51.

04 Competitive content audit: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

five public competitor posts, dates, formats

2 AI-assisted work

code hooks, proof, CTA and engagement by format

3 Reviewable artifact

gap and differentiation map

4 Control point

Adapt the unmet need, not the competitor wording

Source trace: legacy:52-55 • Lab 01 • Human approval precedes publication.

04 Competitive content audit: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT five public competitor posts, dates, formats

TASK code hooks, proof, CTA and engagement by format

RETURN gap and differentiation map; include a source column, assumption flag and reviewer decision.

RULE Adapt the unmet need, not the competitor wording

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Copying creative weakens differentiation

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

04 Competitive content audit: worked comparison

CHART

Read the signal

Save rate: 1.2 → 1.8 → 2.4. Synthetic teaching data.

Decision rule

Adapt the unmet need, not the competitor wording

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

04 Competitive content audit: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	five public competitor posts, dates, formats	Hold if unverified
Output fitness	gap and differentiation map	Adapt the unmet need, not the competitor wording
Risk review	Copying creative weakens differentiation	Escalate or revise
Metric readout	Save rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

04 Competitive content audit: review evidence

EVIDENCE

Artifact to retain

gap and differentiation map.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Copying creative weakens differentiation

Release check

Adapt the unmet need, not the competitor wording. Recheck save rate against the campaign objective after launch.

Lab 01 evidence: save the artifact, decision and one corrected revision. Source: legacy:52-55.

05 Campaign brief and brand voice: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

offer facts, audience, exclusions, voice rules

2 AI-assisted work

constrain AI output with proof and prohibited claims

3 Reviewable artifact

approved creative brief

4 Control point

Approve only claims supported by source facts

Source trace: HBR • Lab 01 • Human approval precedes publication.

05 Campaign brief and brand voice: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT offer facts, audience, exclusions, voice rules

TASK constrain AI output with proof and prohibited claims

RETURN approved creative brief; include a source column, assumption flag and reviewer decision.

RULE Approve only claims supported by source facts

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

AI may invent benefits and testimonials

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

05 Campaign brief and brand voice: worked comparison CHART

Read the signal

Approval rate: 42 → 65 → 81.
Synthetic teaching data.

Decision rule

Approve only claims supported by
source facts

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

05 Campaign brief and brand voice: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	offer facts, audience, exclusions, voice rules	Hold if unverified
Output fitness	approved creative brief	Approve only claims supported by source facts
Risk review	AI may invent benefits and testimonials	Escalate or revise
Metric readout	Approval rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

05 Campaign brief and brand voice: review evidence

EVIDENCE

Artifact to retain

approved creative brief. Record the input source, prompt version, reviewer, date and final status.

Failure signature

AI may invent benefits and testimonials

Release check

Approve only claims supported by source facts. Recheck approval rate against the campaign objective after launch.

Lab 01 evidence: save the artifact, decision and one corrected revision. Source: HBR.

06 Content pillar allocation: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

brand goal, journey stages, available production hours

2 AI-assisted work

allocate educate, proof and offer posts

3 Reviewable artifact

four-week pillar mix

4 Control point

Rebalance when a pillar misses its intended KPI

Source trace: legacy:59-61 • Lab 02 • Human approval precedes publication.

06 Content pillar allocation: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT brand goal, journey stages, available production hours

TASK allocate educate, proof and offer posts

RETURN four-week pillar mix; include a source column, assumption flag and reviewer decision.

RULE Rebalance when a pillar misses its intended KPI

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Posting volume is not a strategy

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

06 Content pillar allocation: worked comparison

CHART

Read the signal

Qualified actions: 14 → 19 → 27.
Synthetic teaching data.

Decision rule

Rebalance when a pillar misses its intended KPI

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

06 Content pillar allocation: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	brand goal, journey stages, available production hours	Hold if unverified
Output fitness	four-week pillar mix	Rebalance when a pillar misses its intended KPI
Risk review	Posting volume is not a strategy	Escalate or revise
Metric readout	Qualified actions and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

06 Content pillar allocation: review evidence

EVIDENCE

Artifact to retain

four-week pillar mix. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Posting volume is not a strategy

Release check

Rebalance when a pillar misses its intended KPI. Recheck qualified actions against the campaign objective after launch.

Lab 02 evidence: save the artifact, decision and one corrected revision. Source: legacy:59-61.

07 Prompt specification: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

role, audience, facts,
format, constraints

2 AI-assisted work

supply structured
context and
acceptance criteria

3 Reviewable artifact

repeatable prompt
template

4 Control point

Keep facts and output
schema explicit

Source trace: AI Strategy 2025 • Lab 02 • Human approval precedes publication.

07 Prompt specification: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT role, audience, facts, format, constraints

TASK supply structured context and acceptance criteria

RETURN repeatable prompt template; include a source column, assumption flag and reviewer decision.

RULE Keep facts and output schema explicit

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Vague prompts produce generic copy

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

07 Prompt specification: worked comparison

CHART

Read the signal

Usable drafts: 2 → 5 → 8. Synthetic teaching data.

Decision rule

Keep facts and output schema explicit

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

07 Prompt specification: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	role, audience, facts, format, constraints	Hold if unverified
Output fitness	repeatable prompt template	Keep facts and output schema explicit
Risk review	Vague prompts produce generic copy	Escalate or revise
Metric readout	Usable drafts and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

07 Prompt specification: review evidence

Artifact to retain

repeatable prompt template.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Vague prompts produce generic copy

Release check

Keep facts and output schema explicit. Recheck usable drafts against the campaign objective after launch.

Lab 02 evidence: save the artifact, decision and one corrected revision. Source: AI Strategy 2025.

08 Source-grounded claim review: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

product sheet, price list, campaign brief

2 AI-assisted work

trace every generated claim to approved evidence

3 Reviewable artifact

claim-to-source register

4 Control point

Hold unverified comparative or health claims

Source trace: IBM • Lab 02 • Human approval precedes publication.

08 Source-grounded claim review: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT product sheet, price list, campaign brief

TASK trace every generated claim to approved evidence

RETURN claim-to-source register; include a source column, assumption flag and reviewer decision.

RULE Hold unverified comparative or health claims

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Confident output is not proof

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

08 Source-grounded claim review: worked comparison CHART

Read the signal

Claims approved: 5 → 8 → 10.
Synthetic teaching data.

Decision rule

Hold unverified comparative or health claims

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

08 Source-grounded claim review: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	product sheet, price list, campaign brief	Hold if unverified
Output fitness	claim-to-source register	Hold unverified comparative or health claims
Risk review	Confident output is not proof	Escalate or revise
Metric readout	Claims approved and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

08 Source-grounded claim review: review evidence

EVIDENCE

Artifact to retain

claim-to-source register. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Confident output is not proof

Release check

Hold unverified comparative or health claims. Recheck claims approved against the campaign objective after launch.

Lab 02 evidence: save the artifact, decision and one corrected revision. Source: IBM.

09 Community advocate plan: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

customer feedback,
permission log, loyalty
goals

2 AI-assisted work

identify advocates and
design a voluntary
contribution loop

3 Reviewable artifact

advocate engagement
plan

4 Control point

Use consented stories
with attribution

Source trace: legacy:25,176-178 • Lab 02 • Human approval precedes publication.

09 Community advocate plan: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT customer feedback, permission log, loyalty goals

TASK identify advocates and design a voluntary contribution loop

RETURN advocate engagement plan; include a source column, assumption flag and reviewer decision.

RULE Use consented stories with attribution

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Incentives can distort authentic reviews

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

09 Community advocate plan: worked comparison

CHART

Opt-in advocates

Read the signal

Opt-in advocates: 8 → 15 → 23.
Synthetic teaching data.

Decision rule

Use consented stories with attribution

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

09 Community advocate plan: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	customer feedback, permission log, loyalty goals	Hold if unverified
Output fitness	advocate engagement plan	Use consented stories with attribution
Risk review	Incentives can distort authentic reviews	Escalate or revise
Metric readout	Opt-in advocates and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

09 Community advocate plan: review evidence

EVIDENCE

Artifact to retain

advocate engagement plan.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Incentives can distort authentic reviews

Release check

Use consented stories with attribution. Recheck opt-in advocates against the campaign objective after launch.

Lab 02 evidence: save the artifact, decision and one corrected revision. Source: legacy:25,176-178.

10 Campaign economics: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

gross margin,
conversion rate, media
budget

2 AI-assisted work

derive allowable CPA
and break-even ROAS

3 Reviewable artifact

budget guardrail sheet

4 Control point

Stop spend above
allowable CPA after
sufficient evidence

Source trace: legacy:163-174 • Lab 02 • Human approval precedes publication.

10 Campaign economics: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT gross margin, conversion rate, media budget

TASK derive allowable CPA and break-even ROAS

RETURN budget guardrail sheet; include a source column, assumption flag and reviewer decision.

RULE Stop spend above allowable CPA after sufficient evidence

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

ROAS alone ignores margin and fulfillment

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

10 Campaign economics: worked comparison

CHART

Read the signal

Contribution margin: 20 → 28 → 36.
Synthetic teaching data.

Decision rule

Stop spend above allowable CPA
after sufficient evidence

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

10 Campaign economics: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	gross margin, conversion rate, media budget	Hold if unverified
Output fitness	budget guardrail sheet	Stop spend above allowable CPA after sufficient evidence
Risk review	ROAS alone ignores margin and fulfillment	Escalate or revise
Metric readout	Contribution margin and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

10 Campaign economics: review evidence

Artifact to retain

budget guardrail sheet. Record the input source, prompt version, reviewer, date and final status.

Failure signature

ROAS alone ignores margin and fulfillment

Release check

Stop spend above allowable CPA after sufficient evidence. Recheck contribution margin against the campaign objective after launch.

Lab 02 evidence: save the artifact, decision and one corrected revision. Source: legacy:163-174.

11 Platform feasibility scoring: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

audience fit, format fit,
cost, capability

2 AI-assisted work

weight factors and
score channels
consistently

3 Reviewable artifact

platform selection
matrix

4 Control point

Pilot only channels
above threshold and
with owner

Source trace: legacy:18-24 • Lab 03 • Human approval precedes publication.

11 Platform feasibility scoring: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT audience fit, format fit, cost, capability

TASK weight factors and score channels consistently

RETURN platform selection matrix; include a source column, assumption flag and reviewer decision.

RULE Pilot only channels above threshold and with owner

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Popularity is not audience fit

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

11 Platform feasibility scoring: worked comparison

CHART

Read the signal

Fit score: 58 → 72 → 83. Synthetic teaching data.

Decision rule

Pilot only channels above threshold and with owner

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

11 Platform feasibility scoring: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	audience fit, format fit, cost, capability	Hold if unverified
Output fitness	platform selection matrix	Pilot only channels above threshold and with owner
Risk review	Popularity is not audience fit	Escalate or revise
Metric readout	Fit score and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

11 Platform feasibility scoring: review evidence

EVIDENCE

Artifact to retain

platform selection matrix.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Popularity is not audience fit

Release check

Pilot only channels above threshold and with owner.
Recheck fit score against the campaign objective after launch.

Lab 03 evidence: save the artifact, decision and one corrected revision. Source: legacy:18-24.

12 Instagram format choice: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

creative inventory,
placement, audience
behavior

2 AI-assisted work

match Feed, Stories or
Reels to message and
asset

3 Reviewable artifact

format-to-CTA map

4 Control point

Use motion where
demonstration adds
evidence

Source trace: legacy:67-95 • Lab 03 • Human approval precedes publication.

12 Instagram format choice: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT creative inventory, placement, audience behavior

TASK match Feed, Stories or Reels to message and asset

RETURN format-to-CTA map; include a source column, assumption flag and reviewer decision.

RULE Use motion where demonstration adds evidence

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Old IGTV guidance is obsolete

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

12 Instagram format choice: worked comparison

CHART

Read the signal

Completion rate: 12 → 19 → 27.
Synthetic teaching data.

Decision rule

Use motion where demonstration
adds evidence

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

12 Instagram format choice: decision matrix

Gate	Evidence to inspect	Action
Input quality	creative inventory, placement, audience behavior	Hold if unverified
Output fitness	format-to-CTA map	Use motion where demonstration adds evidence
Risk review	Old IGTV guidance is obsolete	Escalate or revise
Metric readout	Completion rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

12 Instagram format choice: review evidence

EVIDENCE

Artifact to retain

format-to-CTA map. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Old IGTV guidance is obsolete

Release check

Use motion where demonstration adds evidence. Recheck completion rate against the campaign objective after launch.

13 Facebook and Instagram roles: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

community intent,
account assets,
response capacity

2 AI-assisted work

separate discovery and
community service
objectives

3 Reviewable artifact

cross-placement plan

4 Control point

Keep creative adapted
to placement context

Source trace: legacy:98-104 • Lab 03 • Human approval precedes publication.

13 Facebook and Instagram roles: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT community intent, account assets, response capacity

TASK separate discovery and community service objectives

RETURN cross-placement plan; include a source column, assumption flag and reviewer decision.

RULE Keep creative adapted to placement context

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Duplicated creative may crop or underperform

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

13 Facebook and Instagram roles: worked comparison CHART

Read the signal

Response rate: 35 → 49 → 62.
Synthetic teaching data.

Decision rule

Keep creative adapted to placement context

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

13 Facebook and Instagram roles: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	community intent, account assets, response capacity	Hold if unverified
Output fitness	cross-placement plan	Keep creative adapted to placement context
Risk review	Duplicated creative may crop or underperform	Escalate or revise
Metric readout	Response rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

13 Facebook and Instagram roles: review evidence

EVIDENCE

Artifact to retain

cross-placement plan. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Duplicated creative may crop or underperform

Release check

Keep creative adapted to placement context. Recheck response rate against the campaign objective after launch.

14 LinkedIn B2B feasibility: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

buying committee,
professional proof,
lead value

2 AI-assisted work

score professional
audience against
acquisition cost

3 Reviewable artifact

B2B pilot rationale

4 Control point

Test only when deal
economics support
cost

Source trace: legacy:platforms • Lab 03 • Human approval precedes publication.

14 LinkedIn B2B feasibility: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT buying committee, professional proof, lead value

TASK score professional audience against acquisition cost

RETURN B2B pilot rationale; include a source column, assumption flag and reviewer decision.

RULE Test only when deal economics support cost

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Broad consumer hooks may misfit B2B

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

14 LinkedIn B2B feasibility: worked comparison

CHART

Qualified leads

Read the signal

Qualified leads: 7 → 12 → 17.
Synthetic teaching data.

Decision rule

Test only when deal economics
support cost

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

14 LinkedIn B2B feasibility: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	buying committee, professional proof, lead value	Hold if unverified
Output fitness	B2B pilot rationale	Test only when deal economics support cost
Risk review	Broad consumer hooks may misfit B2B	Escalate or revise
Metric readout	Qualified leads and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

14 LinkedIn B2B feasibility: review evidence

EVIDENCE

Artifact to retain

B2B pilot rationale. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Broad consumer hooks may misfit B2B

Release check

Test only when deal economics support cost. Recheck qualified leads against the campaign objective after launch.

15 TikTok short-video feasibility: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

demonstration
potential, editing time,
audience age

2 AI-assisted work

compare hook
retention and
production burden

3 Reviewable artifact

video pilot decision

4 Control point

Require native-format
proof before budget
scale

Source trace: official • Lab 03 • Human approval precedes publication.

15 TikTok short-video feasibility: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT demonstration potential, editing time, audience age

TASK compare hook retention and production burden

RETURN video pilot decision; include a source column, assumption flag and reviewer decision.

RULE Require native-format proof before budget scale

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Trend imitation can weaken brand fit

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

15 TikTok short-video feasibility: worked comparison

CHART

Read the signal

3-second hold: 24 → 35 → 46.
Synthetic teaching data.

Decision rule

Require native-format proof before
budget scale

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

15 TikTok short-video feasibility: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	demonstration potential, editing time, audience age	Hold if unverified
Output fitness	video pilot decision	Require native-format proof before budget scale
Risk review	Trend imitation can weaken brand fit	Escalate or revise
Metric readout	3-second hold and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

15 TikTok short-video feasibility: review evidence

EVIDENCE

Artifact to retain

video pilot decision. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Trend imitation can weaken brand fit

Release check

Require native-format proof before budget scale. Recheck 3-second hold against the campaign objective after launch.

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

30 Community response triage: review evidence

EVIDENCE

Artifact to retain

response decision tree. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Bot replies can disclose account data

Release check

Human handles safety, legal and personal issues. Recheck resolved cases against the campaign objective after launch.

Lab 06 evidence: save the artifact, decision and one corrected revision. Source: legacy:176-178.

31 Tracking event map: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

landing page, click IDs, consent, lead form

2 AI-assisted work

map ad click to qualified lead and CRM status

3 Reviewable artifact

event and UTM schema

4 Control point

Validate event firing with test conversion

Source trace: legacy:133-135,150-151 • Lab 07 • Human approval precedes publication.

31 Tracking event map: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT landing page, click IDs, consent, lead form

TASK map ad click to qualified lead and CRM status

RETURN event and UTM schema; include a source column, assumption flag and reviewer decision.

RULE Validate event firing with test conversion

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Pixel fires without consent or wrong event

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

31 Tracking event map: worked comparison

CHART

Read the signal

Matched leads: 35 → 52 → 68.
Synthetic teaching data.

Decision rule

Validate event firing with test conversion

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

31 Tracking event map: decision matrix

Gate	Evidence to inspect	Action
Input quality	landing page, click IDs, consent, lead form	Hold if unverified
Output fitness	event and UTM schema	Validate event firing with test conversion
Risk review	Pixel fires without consent or wrong event	Escalate or revise
Metric readout	Matched leads and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

31 Tracking event map: review evidence

Artifact to retain

event and UTM schema.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Pixel fires without consent or wrong event

Release check

Validate event firing with test conversion. Recheck matched leads against the campaign objective after launch.

Lab 07 evidence: save the artifact, decision and one corrected revision. Source: legacy:133-135,150-151.

32 Metric hierarchy: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

reach, engagement,
click, conversion,
revenue

2 AI-assisted work

separate diagnostic
from outcome metrics

3 Reviewable artifact

KPI dashboard model

4 Control point

Judge campaign on
objective metric

Source trace: legacy:136-141 • Lab 07 • Human approval precedes publication.

32 Metric hierarchy: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT reach, engagement, click, conversion, revenue

TASK separate diagnostic from outcome metrics

RETURN KPI dashboard model; include a source column, assumption flag and reviewer decision.

RULE Judge campaign on objective metric

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Likes cannot prove commercial impact

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

32 Metric hierarchy: worked comparison

CHART

Read the signal

Lead conversion: 1.3 → 2.1 → 3.
Synthetic teaching data.

Decision rule

Judge campaign on objective metric

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

32 Metric hierarchy: decision matrix

Gate	Evidence to inspect	Action
Input quality	reach, engagement, click, conversion, revenue	Hold if unverified
Output fitness	KPI dashboard model	Judge campaign on objective metric
Risk review	Likes cannot prove commercial impact	Escalate or revise
Metric readout	Lead conversion and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

32 Metric hierarchy: review evidence

EVIDENCE

Artifact to retain

KPI dashboard model. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Likes cannot prove commercial impact

Release check

Judge campaign on objective metric. Recheck lead conversion against the campaign objective after launch.

Lab 07 evidence: save the artifact, decision and one corrected revision. Source: legacy:136-141.

33 CTR and CPC diagnosis: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

impressions, clicks, spend

2 AI-assisted work

calculate CTR and CPC by ad variant

3 Reviewable artifact

creative efficiency report

4 Control point

Refresh hook when CTR falls with stable reach

Source trace: legacy:138-140 • Lab 07 • Human approval precedes publication.

33 CTR and CPC diagnosis: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT impressions, clicks, spend

TASK calculate CTR and CPC by ad variant

RETURN creative efficiency report; include a source column, assumption flag and reviewer decision.

RULE Refresh hook when CTR falls with stable reach

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Low CPC can still bring poor leads

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

33 CTR and CPC diagnosis: worked comparison

CHART

Read the signal

CTR: 1.1 → 1.8 → 2.4. Synthetic teaching data.

Decision rule

Refresh hook when CTR falls with stable reach

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

33 CTR and CPC diagnosis: decision matrix

Gate	Evidence to inspect	Action
Input quality	impressions, clicks, spend	Hold if unverified
Output fitness	creative efficiency report	Refresh hook when CTR falls with stable reach
Risk review	Low CPC can still bring poor leads	Escalate or revise
Metric readout	CTR and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

33 CTR and CPC diagnosis: review evidence

EVIDENCE

Artifact to retain

creative efficiency report.
Record the input source, prompt version, reviewer, date and final status.

Failure signature

Low CPC can still bring poor leads

Release check

Refresh hook when CTR falls with stable reach. Recheck ctr against the campaign objective after launch.

Lab 07 evidence: save the artifact, decision and one corrected revision. Source: legacy:138-140.

34 CPA and ROAS diagnosis: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

spend, tracked conversions, revenue

2 AI-assisted work

calculate CPA, ROAS and contribution return

3 Reviewable artifact

unit economics table

4 Control point

Compare with margin-adjusted break-even

Source trace: legacy:141,168 • Lab 07 • Human approval precedes publication.

34 CPA and ROAS diagnosis: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT spend, tracked conversions, revenue

TASK calculate CPA, ROAS and contribution return

RETURN unit economics table; include a source column, assumption flag and reviewer decision.

RULE Compare with margin-adjusted break-even

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Attribution may omit offline sales

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

34 CPA and ROAS diagnosis: worked comparison

CHART

Read the signal

ROAS: 1.4 → 2 → 2.8. Synthetic teaching data.

Decision rule

Compare with margin-adjusted break-even

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

34 CPA and ROAS diagnosis: decision matrix

DECISION

Gate	Evidence to inspect	Action
Input quality	spend, tracked conversions, revenue	Hold if unverified
Output fitness	unit economics table	Compare with margin-adjusted break-even
Risk review	Attribution may omit offline sales	Escalate or revise
Metric readout	ROAS and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

34 CPA and ROAS diagnosis: review evidence

EVIDENCE

Artifact to retain

unit economics table. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Attribution may omit offline sales

Release check

Compare with margin-adjusted break-even. Recheck roas against the campaign objective after launch.

Lab 07 evidence: save the artifact, decision and one corrected revision. Source: legacy:141,168.

35 Frequency and fatigue: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

reach, impressions,
weekly creative
response

2 AI-assisted work

calculate frequency
and compare decay

3 Reviewable artifact

fatigue alert

4 Control point

Rotate creative when
frequency rises and
CTR falls

Source trace: legacy:137-138 • Lab 07 • Human approval precedes publication.

35 Frequency and fatigue: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT reach, impressions, weekly creative response

TASK calculate frequency and compare decay

RETURN fatigue alert; include a source column, assumption flag and reviewer decision.

RULE Rotate creative when frequency rises and CTR falls

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

More impressions may mean saturation

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

35 Frequency and fatigue: worked comparison

CHART

Read the signal

Frequency: 1.8 → 2.6 → 3.7. Synthetic teaching data.

Decision rule

Rotate creative when frequency rises and CTR falls

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

35 Frequency and fatigue: decision matrix

Gate	Evidence to inspect	Action
Input quality	reach, impressions, weekly creative response	Hold if unverified
Output fitness	fatigue alert	Rotate creative when frequency rises and CTR falls
Risk review	More impressions may mean saturation	Escalate or revise
Metric readout	Frequency and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

35 Frequency and fatigue: review evidence

Artifact to retain

fatigue alert. Record the input source, prompt version, reviewer, date and final status.

Failure signature

More impressions may mean saturation

Release check

Rotate creative when frequency rises and CTR falls. Recheck frequency against the campaign objective after launch.

Lab 07 evidence: save the artifact, decision and one corrected revision. Source: legacy:137-138.

36 A/B test interpretation: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

two variants, same audience, sample size

2 AI-assisted work

compare conversion and uncertainty before choosing

3 Reviewable artifact

test decision memo

4 Control point

Do not crown a winner on tiny samples

Source trace: legacy:153-162 • Lab 08 • Human approval precedes publication.

36 A/B test interpretation: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

INPUT two variants, same audience, sample size

TASK compare conversion and uncertainty before choosing

RETURN test decision memo; include a source column, assumption flag and reviewer decision.

RULE Do not crown a winner on tiny samples

Acceptance test

Output contains the requested artifact, source trace and explicit assumptions.

Reject when

Peeking can create false confidence

Copy the detailed prompt from the matching lab PDF; never paste personal customer data into an unapproved tool.

36 A/B test interpretation: worked comparison

CHART

Read the signal

Conversion rate: 1.2 → 1.6 → 2.
Synthetic teaching data.

Decision rule

Do not crown a winner on tiny samples

All chart values are mock examples, not claimed platform benchmarks. Confirm metric definitions before comparison.

36 A/B test interpretation: decision matrix

Gate	Evidence to inspect	Action
Input quality	two variants, same audience, sample size	Hold if unverified
Output fitness	test decision memo	Do not crown a winner on tiny samples
Risk review	Peeking can create false confidence	Escalate or revise
Metric readout	Conversion rate and source rows	Record baseline → test → decision

The decision belongs to the campaign owner; the model is a drafting and analysis aid.

36 A/B test interpretation: review evidence

Artifact to retain

test decision memo. Record the input source, prompt version, reviewer, date and final status.

Failure signature

Peeking can create false confidence

Release check

Do not crown a winner on tiny samples. Recheck conversion rate against the campaign objective after launch.

Lab 08 evidence: save the artifact, decision and one corrected revision. Source: legacy:153-162.

37 AI-assisted report narrative: operating model

MODEL

INPUT → TRANSFORM → OUTPUT → DECISION

1 Evidence input

clean export, metric definitions, anomalies

2 AI-assisted work

ask AI to summarize changes with cited rows

3 Reviewable artifact

reviewed weekly insight memo

4 Control point

Every statement must trace to data cell

Source trace: legacy:142-149 • Lab 08 • Human approval precedes publication.

37 AI-assisted report narrative: reusable prompt

PROMPT

ROLE Social media campaign analyst for a Singapore SME

Assessment briefing

Read the candidate instructions before the instruments start

Individual

Work alone with approved open-book materials.

Written

Seven open-ended K1–K7 questions • 60 minutes.

Practical

Four evidence tasks • A1–A6 • 90 minutes.

Submit

Use the LMS-TMS upload path shown on the paper.

Assessment

Two instruments assess knowledge and practical evidence

WA (SAQ)

Explain planning, privacy, rights, scheduling, customer behaviour and UGC.

PP

Submit a plan, platform decision, creative artifacts and performance review.

Assessment flow

Evidence and sign-off path

WA

Seven open-ended knowledge responses

PP

Four practical artifacts from Labs 01–08

Assessor

Mark all K and A criteria C or NYC

Sign-off

Record feedback, result and appeal path

Digital attendance and TRAQOM

End-of-course completion evidence

AM record

Confirm morning attendance.

PM record

Confirm afternoon attendance.

Assessment record

Confirm assessment attendance.

TRAQOM

Complete the course quality survey.

Thank you

Continue improving with reviewed evidence
