

Lab 02: Content pillar allocation → Campaign economics

TGS-2021003023 • v1.1 • Synthetic teaching scenario

Scenario

Harbour & Grove is a fictional Singapore home-goods SME launching a reusable desk organiser. The retail price is S\$39; estimated contribution margin is S\$14 per order. No real customer or platform data is included.

Deliverables

- four-week pillar mix; decision: Rebalance when a pillar misses its intended KPI.
- repeatable prompt template; decision: Keep facts and output schema explicit.
- claim-to-source register; decision: Hold unverified comparative or health claims.
- advocate engagement plan; decision: Use consented stories with attribution.
- budget guardrail sheet; decision: Stop spend above allowable CPA after sufficient evidence.

Detailed procedure

1. Allocate a four-week content mix to educate, prove and offer; justify the share by journey need.
2. Use the prompt PDF to generate two drafts from the approved brief; compare each against the acceptance criteria.
3. Create a claim register with generated statement, source fact, reviewer and approval status.
4. Design a consent-based advocate request and a usage-rights record for customer material.
5. Compute allowable CPA from S\$14 contribution margin and explain why ROAS alone is insufficient.
6. Save the approved prompt, rejected draft, claim register and economics sheet.

Acceptance checks

- No real personal information or unlicensed customer content.
- A named source for every factual claim.
- One explicit reviewer decision per output.
- The mock campaign remains unpublished.
