

Lab 04: Audience overlap and exclusions → Pilot test design

1. For the fictional Singapore SME, use first-party segments, channel reach, frequency. deduplicate target groups and set exclusions. Return channel reach plan. Add source, assumption and reviewer columns. Reject when Overlap inflates apparent scale.
2. For the fictional Singapore SME, use Singapore language, price, cultural context. review generated variants for local accuracy. Return localization QA sheet. Add source, assumption and reviewer columns. Reject when Literal translation misses local context.
3. For the fictional Singapore SME, use addressable segment, reachable share, response rate. estimate attainable leads with explicit assumptions. Return funnel estimate. Add source, assumption and reviewer columns. Reject when AI estimates can appear more precise than data.
4. For the fictional Singapore SME, use data categories, pixel consent, vendor terms. score data need against privacy and capability. Return privacy-aware platform decision. Add source, assumption and reviewer columns. Reject when Ad targeting can expose private information.
5. For the fictional Singapore SME, use hypothesis, audience, success threshold. hold one variable while assigning equal budgets. Return channel pilot plan. Add source, assumption and reviewer columns. Reject when Multiple changes erase causal learning.
