

Lab 05: AI-assisted caption writing → Creative variant matrix

1. For the fictional Singapore SME, use approved offer, proof points, persona question. generate hook, value, evidence and CTA variants. Return caption shortlist. Add source, assumption and reviewer columns. Reject when Invented urgency erodes trust.
2. For the fictional Singapore SME, use topic taxonomy, local service area, platform policy. choose descriptive tags with relevance tests. Return tag and location plan. Add source, assumption and reviewer columns. Reject when High-volume tags can attract wrong audience.
3. For the fictional Singapore SME, use product photo, usage rights, visual identity. specify scene, composition and protected brand elements. Return image generation brief. Add source, assumption and reviewer columns. Reject when Generated products may misrepresent reality.
4. For the fictional Singapore SME, use one customer problem, proof, CTA, duration. sequence hook, demonstration, evidence and action. Return shot-by-shot storyboard. Add source, assumption and reviewer columns. Reject when Motion without proof produces weak retention.
5. For the fictional Singapore SME, use one offer, three hooks, two visuals. cross controlled variants and label each cell. Return six-cell test matrix. Add source, assumption and reviewer columns. Reject when Confounded variants hide what worked.
