

Lab 07: Tracking event map → Frequency and fatigue

1. For the fictional Singapore SME, use landing page, click IDs, consent, lead form. map ad click to qualified lead and CRM status. Return event and UTM schema. Add source, assumption and reviewer columns. Reject when Pixel fires without consent or wrong event.
2. For the fictional Singapore SME, use reach, engagement, click, conversion, revenue. separate diagnostic from outcome metrics. Return KPI dashboard model. Add source, assumption and reviewer columns. Reject when Likes cannot prove commercial impact.
3. For the fictional Singapore SME, use impressions, clicks, spend. calculate CTR and CPC by ad variant. Return creative efficiency report. Add source, assumption and reviewer columns. Reject when Low CPC can still bring poor leads.
4. For the fictional Singapore SME, use spend, tracked conversions, revenue. calculate CPA, ROAS and contribution return. Return unit economics table. Add source, assumption and reviewer columns. Reject when Attribution may omit offline sales.
5. For the fictional Singapore SME, use reach, impressions, weekly creative response. calculate frequency and compare decay. Return fatigue alert. Add source, assumption and reviewer columns. Reject when More impressions may mean saturation.
